EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Daniel Chapik on September 29, 2009.

The application has been amended as follows:

Claims 9-11 and 16-18 are canceled.

Claim 1: -----A device for opening a human bladder comprising:

an oblong member for opening the urethral sphincter and forming a distal end of the device, said oblong member being configured to open the urethral sphincter and drain fluid from the bladder into a urethra;

a guide member fixedly coupled with the oblong member for manipulating the oblong member, at least a part of the guide member being made of an elastically deformable material flexible enough to be bent into a first configuration and then unfolding from said first configuration into a second configuration in which said guide member is sufficiently rigid in a longitudinal direction to be used to insert the oblong member into a urinary tract without buckling under longitudinal pressure associated with insertion;

Art Unit: 3761

a guiding device with a compartment for guiding drained urine, the guiding device being adapted to convey the oblong member from the compartment into a urinary canal;

a sealing element to seal between the compartment and the urinary canal; and

a receptacle in fluid communication with the compartment of the guiding device.--

Claim 12: -----The device according to claim 21, wherein the slack tube includes a gripping element allowing the user to grip the slack tube for removing the oblong member from a urinary canal.-----

Claim 19: -----The device according to claim 1, wherein the receptacle is formed of a flexible material allowing manipulation of the guide member through a wall of the receptacle. -----

Claim 21: -----A device for opening a human bladder comprising:

a solid oblong member for opening the urethral sphincter and forming a distal end of the device, said oblong member being configured to open the urethral sphincter and drain fluid from the bladder via a channel disposed along an exterior of the oblong member;

Art Unit: 3761

a guide member fixedly coupled with the oblong member for manipulating the oblong member, at least a part of the guide member being made of an elastically deformable material flexible enough to be bent into a first configuration and then unfolding from said first configuration into a second configuration in which said guide member is sufficiently rigid in a longitudinal direction to be used to insert the oblong member into a urinary tract without buckling under longitudinal pressure associated with insertion; and

a slack tube, the slack tube being less rigid than the oblong member, and the slack tube is longer than the guide member;

wherein the slack tube and the oblong member are provided in one piece so that the channel is fluidly coupled with the slack tube. -----

Reasons for Allowance

Claims 1-8, 12-15, and 19-21 are allowed.

2. The following is an examiner's statement of reasons for allowance:

Regarding Claim 1, the closest prior art reference of record, Knoll et al. (US 5,242,398, "Knoll") teaches a device for opening a human bladder comprising an oblong member (46), a guide member (22) fixedly coupled with the oblong member, a guiding device (24) with a compartment (lumen of 24, see Fig. 2), and a sealing element to seal

Art Unit: 3761

between the compartment and the urinary canal. Knoll fails to teach a receptacle in fluid communication with the compartment of the guiding device because the guiding device as taught is closed in the end opposite to the sealing element and cannot be put into fluid communication with another receptacle. The guiding device of Knoll is designed to be removed after insertion of the urinary device to allow for a separate receptacle to couple with the device in the absence of the guiding device.

Regarding Claim 21, Knoll teaches an oblong member, a guide member, a slack tube (24), wherein the slack tube is longer than the guide member. However, Knoll does not teach that the oblong member has exterior channels or that the slack tube and the oblong member are provided in one piece so that the channel is fluidly coupled with the slack tube. The slack tube of Knoll is separate from the oblong member and is designed to never enter the urinary canal (therefore it would not be obvious to attach it to the oblong member and form a single piece), as evidenced by the enlarged portion 30 which acts to seal the slack tube against the head of the phallus.

In view of these reasons, the claims as amended above are allowable over prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
